

| High Q                   | Symbol                | Unit              | Measurtionsing Conditions |         | Material  |
|--------------------------|-----------------------|-------------------|---------------------------|---------|-----------|
|                          |                       |                   | settings                  | Temp.   | TQ4       |
| Initial permeability     | $\mu_i$               |                   | 796kHz;150mV              | 23°C    | 50±25%    |
| Saturation flux density  | $B_s$                 | mT                | H=4000A/m                 | 23°C    | 330       |
|                          |                       |                   |                           | 100°C   |           |
| Relative temp factor     | $\alpha_{\mu_i}$      | $\times 10^{-6}$  | 100kHz                    | 20~60°C | 10~20     |
| Coercive force           | $H_c$                 | A/m               | H=4000A/m                 | 23°C    | 720       |
| Core loss volume density | $P_{cv}$              | kW/m <sup>3</sup> | 50kHz;150mT               | 20°C    |           |
|                          |                       |                   |                           | 140°C   |           |
| Relative loss factor     | $\tan \delta / \mu_i$ | $\times 10^{-6}$  | 1MHz                      |         | 100       |
| Curie temperature        | $T_c$                 | °C                | 100kHz                    |         | 300       |
| Electrical resistivity   | $\rho$                | $\Omega / m$      |                           |         | $10^{-6}$ |
| Density                  | $d_s$                 | g/cm <sup>3</sup> |                           |         | 5.1       |
